

# Gold Standard GBFS France

An auditable, versioned reference dataset for the 123 French bike-sharing feeds

Raw input · [transport.data.gouv.fr](https://transport.data.gouv.fr) + **MobilityData**

142 candidate GBFS feeds · ~67,000 stations · 6 operator families · no semantic audit

## Five recurring anomaly classes (A1-A5)

### A1 — Out-of-domain

Citiz car-sharing  
labelled as BSS

14 systems

### A2 — Placeholder

Constant  $c = 100$   
on all stations

3 systems

### A3 — Over-capacity

Conditional averaging  
on free-floating

8 systems

### A4 — Geospatial

Transposed coords  
or  $> 3\sigma$  outliers

3.8 % stns

### A5 — Perimeter

Overseas; rural  
 $> 50,000 \text{ km}^2$

5 systems

## Six-step purging pipeline — idempotent · reversible · logged

S1

carsharing  
relabel

S2

placeholder  
detect

S3

capacity  
recompute

S4

geofilter  
 $\phi, \lambda$

S5

topological  
 $\sigma$ -clip

S6

N\_min  
threshold

## Multi-source hybridisation — spatial joins · administrative aggregation

INSEE

46,307

certified  
stations

123

audited  
systems

97

cities  
covered

5,442

dock-based  
(fully audited)

30.9 %

raw stations  
reclassified

## Headline result

**Bordeaux — one A3 fix**

9,921 raw entries → 225  
dock-based stations

National rank

**2 → 14**

**Syntactic standardisation is necessary but not sufficient.**

An open mobility feed is a starting point for research, not a substitute for one.
